

Discovery Grants Program

Instructions to external reviewers

- [How external reviewer reports are used](#)
- [How to evaluate an application](#)
- [Delays in research and dissemination of research results](#)
- [What to avoid](#)
- [Additional information](#)
- [How to access the application and complete your report](#)

How external reviewer reports are used

External reviewers help provide a deeper overall assessment of an application during the peer review process. External reviewers may be familiar with a particular research area or technique and may be able to comment on an applicant's contributions to the field. During deliberations, the Evaluation Group members present and discuss external reviewer reports that were received for an application.

External reviewer reports are considered the applicant's personal information as defined by Section 3 of the *Privacy Act*. As such, at the end of the competition, NSERC provides each applicant with their respective reports, while protecting the names and identifiers of the reviewers and other third parties (e.g., other applicants or researchers). External reviewer reports are not the property of the reviewer and must therefore be destroyed in a secure manner once submitted (e.g., by deleting electronic data files, shredding or burning paper, or arranging for their return to NSERC).

How to evaluate an application

Ultimately, the integrity of the peer review process relies on high quality reviews. In the External Reviewer Report template provided to you on the Extranet, provide a high quality review based on the selection criteria below, taking into consideration any [eligible delays](#). For more information on delays refer to the **Delays in research and dissemination of research results** section below.

Refer only to the information contained in the review material provided. This consists of the application form, proposal, budget justification, the Canadian Common CV (CCV), and, if

applicable, other support sources, references, samples of research contributions, an attestation on confidential research contributions, and the leaves attachment.

A high quality review that provides useful comments for the Evaluation Group and the applicant is:

- **Fair:** Respectful, consistent and appropriate.
- **Informative:** Clear, detailed, constructive and well-justified.
- **Use of inclusive language:** For example, "the applicant" or "they" instead of "he/she". The report should be free from words or sentences that reflect prejudiced, stereotyped or discriminatory language of particular people or groups or their institution.

Selection criteria:

Comment in detail on each of the three selection criteria. Justify your assessment by referring to the information provided in the application materials.

1. Scientific or engineering excellence of the researcher

Applicants must present evidence of meaningful research contributions to the natural sciences and engineering (NSE) field in the past six years. Applicants with eligible leaves of absence may include contributions from their most recent active research period prior to the last six years for a period equivalent to the duration of the leave.

Describe the applicant's strengths and weaknesses related to:

- Knowledge, expertise and experience of the researcher in the natural sciences and engineering, and evidence of their stature in the field.
- Quality and impact of contributions to the proposed research and/or other areas of research in the natural sciences and engineering. Evidence of research accomplishments includes publications, conference presentations and/or proceedings, books or book chapters, patents or technology transfer, technical reports, and/or other methods of dissemination appropriate to the type of research. Impact does not refer to quantitative indicators such as the impact factor of journals or h-index, but to the influence that results have had on other researchers, on the specific field, the discipline as a whole, or on other disciplines.

- Importance of contributions to, and use by, other researchers and end-users.

2. Merit of the proposal

The proposal must clearly present a program of research in the natural sciences and engineering. The program must not be limited to the development of specific applications of existing knowledge; it must propose an original and innovative contribution.

Describe the strengths and weaknesses of the proposal related to:

- Originality and innovation; extent to which the proposal suggests and explores novel or potentially transformative concepts and lines of inquiry in the NSE; extent to which the proposal will lead to advances in the NSE.
- Significance and expected contributions to NSE research; potential for policy and/or technology related impact.
- Clarity and scope of objectives (research program with long-term goals rather than a single short-term project or collection of projects).
- Clarity and appropriateness of methodology.
- Feasibility.
- Consideration of sex, gender and diversity in the research design, if applicable.
- Extent to which the scope of the proposal addresses all relevant issues, including the need for varied expertise within or across disciplines.
- Appropriateness of, and justification for, the budget.
- Demonstration that the Discovery Grant proposal is conceptually distinct from research support held or applied for through CIHR and/or SSHRC.

3. Contribution to the training of highly qualified personnel (HQP)

Contributions to quality training at all levels are valued, including undergraduate students involved in research, graduate students, postdoctoral fellows, technicians and research associates. Assessment is based on both the past training of HQP and the future plans for training.

Describe the applicant's strengths and weaknesses related to:

- Quality and impact of past training of HQP (over the last six years, except where the applicant has eligible leaves of absence and may include supplemental contributions from their most recent active research period prior to the last six years for a period equivalent to the duration of the leave):
 - Training environment provided for HQP
 - Specific actions implemented in support of increased equity, diversity and inclusion in the research and training environment, if applicable
 - HQP awards and research contributions
 - Outcomes and skills gained by HQP
- Quality, suitability and clarity of planned training of HQP in the natural sciences and engineering:
 - Overall training philosophy, including a planned approach to promote participation of a diverse group of HQP
 - Research training plan for individual HQP

Delays in research and dissemination of research results

NSERC recognizes that the COVID-19 pandemic is affecting researchers' and students' capacity to conduct their regular research and training activities. NSERC has published [guidelines](#) on the consideration of the impacts of the COVID-19 pandemic on research and training activities. These guidelines provide direction on how to describe these impacts in an application and information on how they will be considered in the review of contributions to research and training and research and training plans.

Applicants are asked to give start and end dates of any eligible leaves of absence or delays and to explain the impact on their research activity or in the dissemination of research results. Eligible leaves of absence (e.g., parental leave, medical leave, bereavement, extraordinary administrative duties) are those taken within the last six years.

Applicants who have reported an eligible leave of absence in their CCV are entitled to an attachment used to list supplemental contributions to research (list of presentations, interviews and media relations, publications, intellectual property) and to training (list of supervisory activities) beyond the last six years, for a period equivalent to the duration of the leave. The duration of the eligible leave for this attachment must be the same as applicants have reported in their CCV. Supplemental contributions must be taken from the most recent active research period prior to the last six years. This attachment may also be used to list supplemental contributions to research and to training for a period equivalent to the duration of delays related to COVID-19.

External reviewers are expected to recognize the impact of delays and assess the quality of research activity demonstrated by the researcher.

NSERC recognizes that research productivity and contributions to the training of HQP may be disrupted due to delays incurred either by the applicant or by HQP. While applicant delays are taken into account in both the assessment of the Scientific or Engineering Excellence of the Researcher and the Contributions to HQP Training, HQP delays are taken into account in the assessment of the Contributions to HQP Training only.

What to avoid

- Information outside the application material. The onus is on the applicant to provide complete and sufficient information.
- Comments that are vague or short, or that could be construed as sarcastic or inappropriate.
- Overly positive or negative comments that are not supported by references to the application material.
- Unconscious bias, which may be based on a school of thought, fundamental versus applied research, certain sub-disciplines, areas of research or approaches, size or reputation of an institution, personal factors, age, sex or gender of the applicant. For more information, see NSERC's [Unconscious bias training module](#).
- Identifying yourself, other applicants or researchers in your comments.

Additional information

Contextual information on Discovery Grants

NSERC's Discovery Grants program fosters research excellence, supports the activities of academic researchers working at the forefront of science and engineering nationally and internationally, and is instrumental in providing a stimulating research environment for the training of the next generation of researchers. Although Discovery Grants are "grants in aid" and not meant to cover the full costs of a research program, Discovery Grants represent a key source of funding for research in Canadian universities and constitute the foundation of a large part of Canada's research effort in the natural sciences and engineering. These grants cover the direct costs of research only. The researcher's salary and any indirect costs are provided through other mechanisms.

Unlike project-oriented grants, the Discovery Grants are intended to provide support to university researchers who have submitted an excellent application for a long-term program of research. The duration of a Discovery Grant is normally five years.

Conflict of interest and confidentiality

It is important that you adhere to the requirements set out in the [Conflict of Interest and Confidentiality Agreement for Review Committee Members, External Reviewers, and Observers \("the Agreement"\)](#). If you are unable to do so, you must decline to participate in the review process.

External reviewers must not be in any conflicts of interest. If you are in a conflict of interest, or for any other reason are unable to act as an external reviewer, contact us as soon as possible. Specify in your email which application you are unable to review.

As stipulated in the [Agreement](#), there may be a real, perceived or potential conflict of interest when the Evaluation Group member, external reviewer or observer:

- would receive professional or personal benefit resulting from the funding opportunity or application being reviewed;
- has a professional or personal relationship with an applicant or the applicant's institution; or
- has a direct or indirect financial interest in a funding opportunity or application being reviewed.

A conflict of interest may be deemed to exist or perceived as such when Evaluation Group members, external reviewers or observers:

- are a relative or close friend, or have a personal relationship with the applicants;
- are in a position to gain or lose financially or materially from the funding of the application;
- have had long-standing scientific or personal differences with the applicants;
- are currently affiliated with the applicants' institutions, organizations or companies—including research hospitals and research institutes;
- are closely professionally affiliated with the applicants, as a result of having in the last six years:
 - frequent and regular interactions with the applicants in the course of their duties at their department, institution, organization or company;
 - been a supervisor or a trainee of the applicants;
 - collaborated, published or shared funding with the applicants, or have plans to do so in the immediate future; or
 - been employed by the institution, when an institution is the applicant;
- feel for any reason unable to provide an impartial review of the application.

In accordance with the [Agreement](#), review documentation must be stored in a secure manner to prevent unauthorized access. When no longer required, review documentation must be destroyed in a secure manner.

Allegations of policy breaches

Allegations of policy breaches, as described in the  [Tri-Agency Framework: Responsible Conduct of Research](#) must be treated separately from the peer review process. Should your review reveal concerns of possible policy breaches, report any allegation separately to NSERC program staff. Your external reviewer report should only address the application and selection criteria and make no mention of the breach concerns.

Collection and use of personal information

The information you provide is collected under the authority of the *Natural Sciences and Engineering Research Council Act* and stored in a series of NSERC data banks described in NSERC's [Info Source](#). Details on the use and disclosure of this information are described in [Use and Disclosure of Personal Information Provided to NSERC](#). The information is used in accordance with the [Access to Information Act and the Privacy Act](#).

How to access the application and complete your report

NSERC currently provides access to the applications via a secure website, known as the Extranet. Once you agree to provide a review, you will receive an email containing information on how to access the Extranet: one with the link to the Extranet website and your username, and a separate email containing your password, if you are a new reviewer. Once you have logged in to the site, navigate to the application's Evaluation Group (refer to your invitation email for this information) through the list on the right side of the screen.

From the Evaluation Group's page, you will be able to find more detailed instructions on how to view the application and complete your report by hovering your mouse over the "External Reviewers" tab, and selecting the "Instructions to External Reviewers" option.

Note: The Extranet no longer supports Internet Explorer 8. We recommend upgrading to Internet Explorer 9, or using Google Chrome, Firefox or Safari.
